Key features

This boat does not require a motor. In addition to increasing its reliability, this contributes to an eco-friendly and silent way to cross from one bank to another.

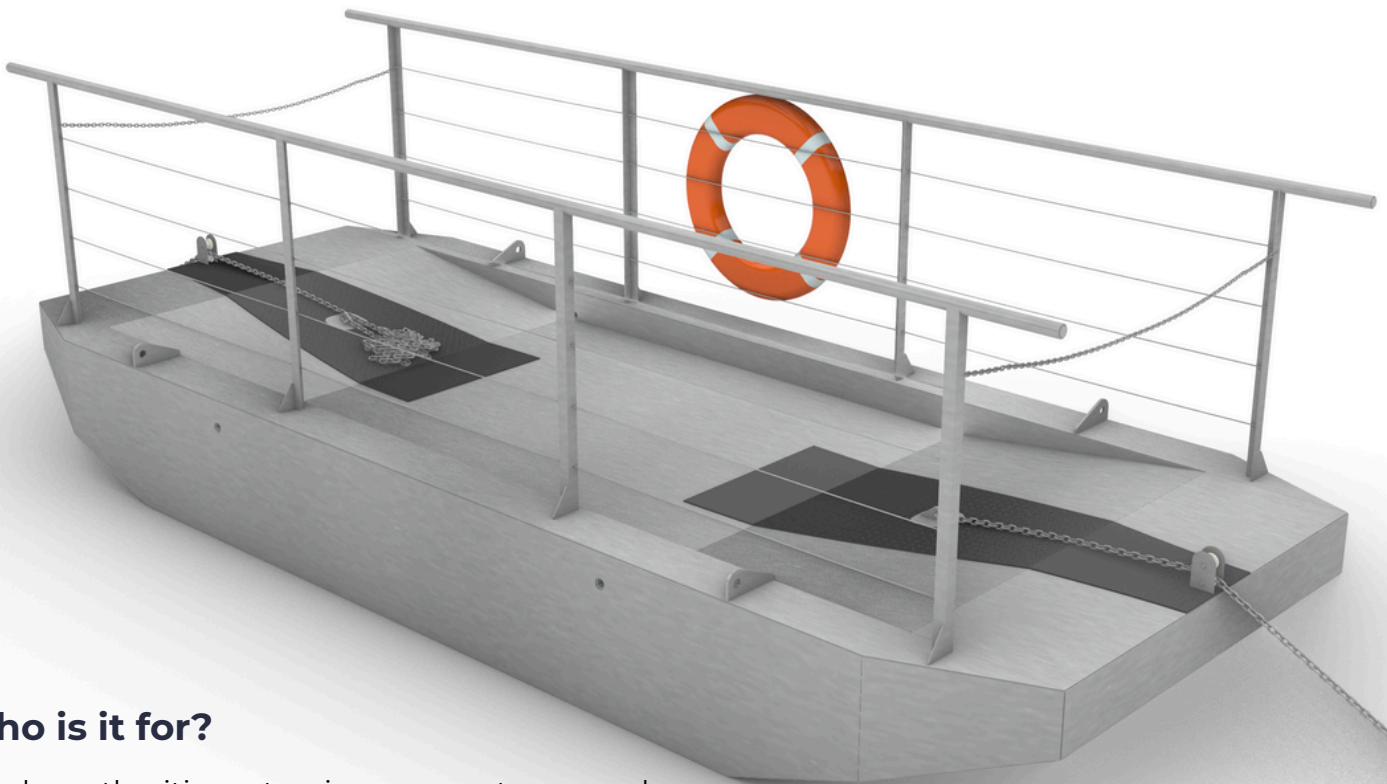

Made of aluminum, this material gives the chain ferry great strength and durability. It is therefore particularly suitable for self-service use.

Thanks to its sufficient buoyancy reserve and self-draining deck, this chain ferry is unsinkable.

Its gentle slope is specially designed to allow better accessibility for the elderly and bicycles.

Uses

- Crossing waterways (rivers, lakes, canals, inlets)
- Continuing a tourist, cycling, or hiking route
- Developing green and river tourism
- Accessing rural areas or islands
- Providing a regular connection for locals

Who is it for?

Local authorities, tourism operators, and individuals looking for an easy-to-install, eco-friendly, practical, and sturdy way to cross a waterway.

Optional extras

- Option to add a removable walkway to allow access for people with reduced mobility
- Option to have non-slip surfacing across the entire bridge

Made in France

Our product is entirely manufactured in Brittany, France. From design to construction, each stage is planned, designed, and carried out locally.
